

### **Mirror Therapy Now Available**

I am pleased to present a new treatment option for patients in the Vancouver/Portland area with severe neuropathic pain including **phantom limb pain and Chronic Regional Pain Syndrome (CRPS) and other commonly resilient presentations.**

The treatment has peer reviewed research (including multiple randomized controlled clinical trials) demonstrating effective reduction of pain and improvement of disability for these populations. The training consists of 3 phases in which the treatment is carried out at home with follow up in clinic between phases for training and in phase monitoring as needed.
